

RELIABLE PLANT GUIDE FOR THE NEWCASTLE AREA

Growing plants that are native to your local area links your garden to the local wildlife and can attract native mammals, birds, frogs and lizards by providing their natural habitat.

- Choose the right plant for the right spot.
- Shrubs or small trees are more suitable for most suburban gardens, rather than forest giants.
- Occasional deep watering during dry periods will encourage plants to develop a deep root system.
- A layer of mulch or compost will help maintain constant soil temperature and conserve water.
