APS MEMBERS, FRIENDS AND MEMBERS OF THE LOCAL COMMUNITY

On a beautiful sunny July day, we met at Trevors Lane, Cherrybrook, for a gentle bushwalk in Berowra Regional Park, to see the early show of spring flowers.

The terrain is Hawkesbury sandstone ridgetop with extensive rock platforms and deep gullies through which run Berowra

Creek and its tributaries. The soil on the ridgetop is sandy loam. The vegetation on the ridgetop is Hills Sclerophyll Sandstone Forest.

We identified >40 species in flower and we probably missed some more.

We took a leisurely few hours walking the track, taking great delight in spotting the different flowering plants and trying to identify the species.
